- ROBOT Framework
- Selenuim Webdriver
- Locust and JMeter
- Django Framework
- Flask Framework
- React
- Splash for Web scraping

Language

- English
- Japanese (basic)
- Thai

About Me

"I am a software enthusiast dedicated to continuous growth and professional excellence. Having a background in software testing and development, I am now looking to dive deep into real-world software engineering. I am particularly skilled in API design and full-stack development and am eager to contribute to a forward-thinking team. My journey is fueled by a desire to learn best practices in the industry, which will eventually empower me to innovate and build my own software products."

Experience

2022 – Present

Work in Mycos technology Co., Ltd

I am a Quality Assurance Engineer at Mycos Tech, where I handle both automation and manual testing for our Point of Sale (POS) system. My role involves testing the web-based platform and its API integrations with third-party systems, as well as assisting in investigating and identifying bugs.

November 2021 - April 2022

Assistant Development Science Asset Booking System

I'm responsible for gathering requirements and designing the web application for a private booking system within the Faculty of Science. We're building the system using Django and Vue.js, tailoring the design to meet the specific needs of our internal users.

October 2020- April 2021

Internship in Mulberrysoft Co., Ltd.

I've been assigned to develop a web-based fertilizer management system for Thai farmers. I'm currently working on the front-end, focusing on the user interface and designing the data upload workflows based on project requirements.
